Specs sheet Triple 16

General information about the product

It is a multifunctional fertilizer, as it can be applied to fruit trees, grasses, flowers and roses, as well as other crops such as vegetables.

Fertilizer formulated with nitrogen, phosphorus and potassium. Nitrogen has an important role in photosynthesis, nitrogen is taken by the plant in nitric (NO₃) and ammoniacal (NH₄) form.

Phosphorus is vital in the early stages of growth, developing roots, stems, leaves, flowers and fruits.

Potassium is involved in the formation of sugars and starches, forming plants resistant to disease pests.

Applications and recommendations

ROYAL GARDENS produces triple 16 fertilizer, directly applied to the soil, with a grainy presentation for better handling and application

Dose: flowers and indoor plants, 5gr for small plants, 10gr for medium plants and 15gr for larger plants every 30 days approx.

For small trees 150gr and 500gr to 1 kg for medium to large trees. At the beginning, in the middle and at the end of the rainy season.

Application method: loosen the soil a little and apply the fertilizer, then cover it with the same soil. Do not apply near the stem.
